### **sky[nav]pro™ launch at the African Airshow in Ghana:**

#### **New data communication and control system for Unmanned Air Vehicle (UAV)**

**Berlin.** Once again an important milestone: Dacher Systems successfully launched its **new data communication and control system for Unmanned Air Vehicle (UAV)** at the **African Airshow in Ghana**, the **first aerospace and aviation exhibition of West Africa**, which was held from the 24<sup>th</sup> to 26 of October. Communication between mission control stations and the UAV is enabled by using the **sky[nav]pro™ Network to conduct and survey autonomous flights.**

Thanks to highly reliable IRIDIUM satellite technology, the missions of every sky[nav]pro™-equipped vehicle can be **managed controlled and monitored even in extremely remote regions without any terrestrial infrastructure.** The team of the Aviation Solutions Department welcomed highly interested guests and representatives from civil industries, governments, monarch and military at their stand.

#### **About SkyNavPro™:**

*SkyNavPro™ has been developed by Dacher Systems GmbH. Dacher Systems had been established in 2005 by CEO Tiberius Dacher as an IBM-based systems company and rapidly developed into a solutions provider for telematics and avionics. As member of the European Telematics Association Telematics PRO e.V., Dacher Systems is known for its sustainable designs to meet social as well as industrial mobility demands. To meet the needs of aviation, the company's department Aviation Solutions has been founded under the leadership of Marwin D. Knoblauch. The sites in Berlin, Düsseldorf, Zurich and Kronstadt assist international corporations in the aerospace sector. Both, Tiberius Dacher and Marwin D. Knoblauch, are keen and experienced pilots.*
