### **sky[nav]pro™ with New Three-Tiered Pricing Model: Weekend Launch at Bienenfarm Airfield**

**Berlin.** Dacher Systems' second participation at AERO was a resounding success: "Response to our product was huge," delights Tiberius Dacher, Managing Director at Dacher Systems. "We thank all stand visitors for their conversations and feedback on our **sky[nav]pro™ BlueLine Box.**" This portable transceiver communicates via terrestrial and satellite-based technologies and transmits received data via WiFi to the tablet being used for navigation. However, there was also great interest in the recently launched **sky[nav]pro™ RedLine Box** that also allows **reception of transponder and FLARM signals.** As a thank you for the very positive response at the trade fair there is a very special gift for all new customers: sky[nav]pro™ will in May 2017 be offering a free, integrated weather briefing with friendly support of the German weather service (Deutscher Wetterdienst - DWD).

Dacher Systems has also given some thought to pricing structures: "The market for private pilots is so varied that we want to better adapt our range to this," explained Tiberius Dacher. For this reason from May 2017 there will be a new three-tiered pricing structure for the **sky[nav]pro™ BlueLine Box:** for **Occasional Fliers** the system offers a prepaid model without any monthly fixed costs. The new **Standard Tariff** for pilots who fly regularly costs a monthly fee of just €29 and offers cheaper data tariffs. For those spending many flight hours in the air **Frequent Fliers** can enjoy the cheapest data tariffs for live services at €49.

### **Practice Test at Bienenfarm Airfield (EDOJ)**

There is no better place to demonstrate the application spectrum of the **sky[nav]pro™** than in a real-life situation. For this reason Dacher Systems offers all those interested an **AERO follow-up including practical test.** From **29 April** (10.30 am) to **30 April** (5.30 pm) it will be possible to experience navigation and flight weather in a live test at the Bienenfarm Airfield (EDOJ). Furthermore, the event will provide an overview of electric fleet management for flying schools and flight operators by means of terrestrial and satellite-based tracking. What is special about this: **Dacher Systems covers the landing fee** for participating aircraft with up to two tons MTOM.

### **About SkyNavPro™:**

SkyNavPro™ was developed by Dacher Systems GmbH. Dacher Systems was established in 2005 by CEO Tiberius Dacher as an IBM-based systems company and rapidly developed into a solutions provider for telematics and avionics. As a member of the European telematics company, Telematics PRO e.V., Dacher Systems is known for the creation and design of social mobility requirements. The sites in Berlin, Düsseldorf, Zurich and Kronstadt assist international corporations in the aerospace sector. The owner and CEO, Tiberius Dacher, is a keen private pilot.
